Most computers come with Photoshop installed. See Chapters 2, 3, and 8 for information about each of the programs in the suite. Update the application regularly. Most are free downloads at Adobe's website, `www.adobe.com/creativecloud`. Look on the left for Photoshop and other programs. Be sure to use the update, and when you do, don't forget to update your printer driver also. Table 3-2 shows the Photoshop collection of features. Table 3-2 Using Photoshop's Features

Use a good anti-virus program to scan all of your computer's programs to remove any threats to your computer before you download and install anything. Setting Up Photoshop Photoshop can be run either directly from an installation disk, or from the CD or DVD that accompanies the software and is burned during installation. If you have installed Photoshop and want to change its settings, open Preferences and perform adjustments as needed. After the installation, you find your new Photoshop application under Applications in Mac OS and under Program Files in Windows. On the Windows version, you also find an Adobe Photoshop folder that contains various Photoshop's files and settings for installation and configuration. You can open and use the program straight away. Checking the status of the program To check the status of your Photoshop installation, open the Adobe Photoshop folder in Windows or the Preferences folder in Mac OS. You see something similar to the example shown in Figure 3-1, but you may or may not see additional buttons. Figure 3-1: Find the name of your Photoshop program in the tree-view menu. If you do see additional options, you can use them to adjust your Photoshop application. Launch Photoshop If you don't want to launch Photoshop, you can use the Get Adobe Photoshop

Here are some of the best tips and tricks on Photoshop for graphic designers, web designers, photographers, photographers, creative circles, and programmers. One of the most powerful features of Photoshop is the ability to edit multiple layers at once. You can apply different changes and effects to each layer, and you can combine them to generate several different results. An easy way to work with multiple layers is to zoom out to a level that allows you to see your layers, merge them, or organize them. Click the zoom button to toggle between the viewport and Photoshop canvas (live preview), and click the G button to toggle between layers and the canvas view. You can also select multiple objects with the Click-to-Select tool. You may want to use this tool to select everything in the layer (if you want to work on a basis of deleting everything) or press Ctrl + A to select all objects. You may want to use this tool to select one object in the layer (to change its effects). Click and drag on your image to scale it. Zoom out to toggle between the zoomed-in view and the whole canvas (live preview). Use the + and - buttons to zoom in and out, respectively. Hold Shift to zoom in, and hold Ctrl to zoom out. To center an object on the canvas, click and drag the object to wherever you want it to be placed. Alternatively, press the C key and tap on the screen, or press the C key and drag the mouse on the screen to center the object. To move the center of an object, click anywhere within the object and drag to move it. You can zoom in on an object by using the Zoom tool. Press the Z key and click the object to Zoom in, or press the / key and click the object to Zoom in. Use the - key to zoom out, and the + key to zoom in more. To change the zoom level, use the scroll wheel on your mouse. To zoom in or zoom out, use the mouse scroll wheel. Use the Brush tool to paint on the canvas. Use the W key to set the brush size, and the A key to set the brush style. Use the shift key to change the brush size and style. Use the Eraser tool to remove a part of your image. In Photoshop, shapes are used to create objects. In this tutorial, we a681f4349e

What you need to know The fights tend to take place at one venue: the Arena. Tickets go on sale on the day they are available - usually a couple of days before. A pre-sale often gives you a head start on buying the tickets. The crowd at the Arena is always great, particularly when Japanese imports are in town. Your best bet is to try to get there by around 6pm, as early-birds often get great seats - but you might have to queue. After the fights, in the arena's bar and lounge, you can buy a cheap beer. Costs average around £4 a pint in the UK. If you'd prefer to eat, you'll find a selection of bars and restaurants up on the first floor of the Arena. They tend to charge around £20-£25 for a meal. Where to stay If the Arena is your home away from home, you'll be able to save some money by staying at one of the nearby hotels. The Xchange (01992-453555; www.hotel.arena-hong-kong.com; 2nd fl, InterContinental Century Centre; d from £280;) is the smartest hotel near the Arena, and it has a solid range of rooms that are comfortable enough. There are cheaper places that you can find online (sometimes even in the pages of SportExpress.com). But be warned, some of them aren't very nice. Where to eat You can find somewhere to eat in the hotel, or one of the restaurants and bars downstairs on the first floor of the Arena. The Henry Shang Chinese Restaurant (01992-453555; 2nd fl, InterContinental Century Centre; mains from £7; 11am-10pm) is best for Chinese food, but there's also a range of British pub grub. Festivals Hong Kong International Athletic Festival OFFLINE; hongkong.sportexpress.com/ath/ Costs There's a basic charge of £70 for participating in a race, which includes a tracksuit and a t-shirt. This is usually a fixed price. There are also various premium events, where a ticket can cost over £250. But if you want a seat for those, you'll pay for it. Tickets go on sale several days before a

Trabectedin in soft tissue sarcomas: results from an Italian observational study. The efficacy and safety of trabectedin in soft tissue sarcomas (STS) have not been fully investigated. The primary endpoints of the present analysis were overall survival (OS) and progression-free survival (PFS) in STS patients with response evaluation. Secondary endpoints included quality of life (QoL) and toxicities. Safety was evaluated through treatment-related and other adverse events. Between January 2005 and April 2012, 81 patients with advanced STS were enrolled. Median OS was 11.1 months (95% confidence interval [CI], 8.8-14.1 months), median PFS was 7.1 months (95% CI, 5.4-8.9 months), and disease control rate was 48.1%. Median time to progression was 7.5 months (95% CI, 5.9-9.3 months), and stable disease at 12 weeks was observed in 37.7% of patients. During the treatment, grade 3/4 non-haematological toxicities were recorded in 27.8% of patients. No difference was observed regarding drug-related or other adverse events between pre-treatment regimens, including ifosfamide plus doxorubicin plus etoposide, ifosfamide plus doxorubicin, and ifosfamide plus other chemotherapy regimens, except for higher incidence of mucositis in arm A than in arm B. The observed results, together with the favourable cost-benefit ratio, supported the use of trabectedin in STS.

Q: Confusion in convex optimization For convex optimization we have $\phi(x) + \langle g(x), u-x \rangle \geq \phi(u)$ and $\phi(x) + \langle g(x), z-x \rangle \geq \phi(z)$ where g is a convex function and ϕ is a convex function. But when we solve the optimal z , the solution for the above inequality are x and z (see simple two-dimensional examples: If that's the case, then how can we have x and
