AshSofDev Time Converter Crack+ X64

Description Check any timezone easily This is a Windows application capable of showing your local and destination time for any part of the world. It's wrapped in a user-friendly interface and contains a menu for picking the UTC offset. Setting it up doesn't take long. However, it's necessary to have .NET Framework installed to be able to launch this app. If you don't have it, AshSofDev Time Converter offers to download and install it on your behalf. Get the local time and set the destination The main app window has a background with the world map and two clocks: one for the local time (which gets synchronized to your computer) and one for the destination, which you can choose from a simple drop-down menu. The dates are shown as well, so there will be no confusion in this regard. Time is displayed in 12-clock format (AM/PM) in both analog and digital forms. Unfortunately, the developer didn't implement an option for changing this into the 24-clock mode for those who are more accustomed to this format. Choose the UTC offset and location When it comes to the UTC offset, you can pick any geographical location ranging from (UTC-12:00) International Date Line West (first entry in the menu) to (UTC+14:00) Kiritimati Island (last entry). Sadly, this is where AshSofDev Time Converter's functionality ends. There are no customization options available. For example, we would have liked to be able to change the background image with another image or color, as well as the clock colors. Elementary and practical timezone app To wrap it up, AshSofDev Time Converter proves to be a decent timezone utility that serves its purpose, enabling you to seamlessly view time from any part of the world. AshSofDev Time Converter Screenshots: AshSofDev Time Converter User Reviews HOMER Awesome program! I was searching for a program to allow me to quickly change timezones and came across this little gem. The program allows you to choose any timezone and easily convert it. I chose the timezone where I lived at the time (UTC+11) and was converted to PST. Works great! Michael L This is a great little app! It has more features than it needs and a user-friendly interface. I like that you can make sure that the time on your computer
