Application Format: Options: Usage: Example: What's on your fantasy wish list for fantasy football? Follow us Follow us This season has felt like a dream for fantasy owners, but only so far. We've seen a few high-profile players come down with injuries that have destroyed their stock. As a result, owners are scrambling to find alternatives and replace their lost players. How does this happen? These players have proven themselves over the course of multiple seasons, but they will only be able to go so far before they start to decline. Even if they return to their previous form, they'll no longer be the guy who once could be trusted. If you have any big names on your fantasy team that are suddenly on the sidelines, check out the rankings below for some interesting replacements. Lakers Should Test Dwight Howard at Center in Game 7 With the conclusion of the NBA Finals last night, I am ready for the three-game journey that will determine my 2012 NBA Champion. Now, even though I had Detroit winning the series, I am a big believer in fortune favors the bold and that we will ultimately see a new NBA Champion this year. That being said, the two most unbelievable regular season performances have taken place in the last three weeks and they were Detroit and Miami. The Pistons have the best record in the NBA at 59-20 (25-4 at home) and the Heat sit at 61-21 (26-7 at home). I love the fact that both teams are in their second year under a new head coach. I am sure this year will be a special one for the Heat as well. The main problem with the Miami Heat is they lack the depth at point guard. They have not been able to throw ballsy lineups together, mainly because of the number of ball handlers they have. The only positive about the Heat's ball handling is they have two point guards that like to pass. So, if the Heat are able to put them together, they may be able to execute some pretty impressive basketball. As for the Detroit Pistons, they have had a season for the

---

record books. They have the best record in the league, the most victories in the playoffs, and in the Finals, the best record in the playoffs. They have a chance to do it again. Now, I am 1d6a3396d6

### What's New In GaX HSPF Calculator?

\*\*\*\*\*  
\*\*\*\*\* The Gamma-X Heating Seasonal Performance Factor Calculator is an easy-to-use web application that can calculate Heating Seasonal Performance Factor (HSPF). HSPF is a way to describe the thermal efficiency of a heating system. HSPF ranges from 0.0 to 1.0, where 1.0 represents perfect thermal efficiency, and 0.0 represents a system that produces no thermal energy. The HSPF calculator allows a user to calculate HSPF for a given heating system using four common variables: seasonal temperature, temperature rise, outdoor temperature, and amount of heat generated. HSPF is most commonly used in areas that experience seasonal thermal gains and losses. The HSPF calculator includes the option to calculate HSPF for single-speed, two-speed, and variable-speed compressor systems. The HSPF calculator also calculates HSPF for uninsulated and insulated systems. In addition, the HSPF calculator can calculate HSPF for heating systems that use either mechanical or electronic controls. The HSPF calculator allows the user to easily calculate HSPF and inspect the resulting HSPF value for common errors that may occur when calculating HSPF. The calculator includes a memory function that can store HSPF calculations for future use. The HSPF calculator will also calculate a HSPF value using the common assumptions used in the industry.
