Renal cell carcinoma (RCC) is the third most common malignancy of the genitourinary tract and it accounts for approximately 5% of all renal malignancies. The spine is a common site for spinal metastasis (SM) in RCC patients. Patients with RCC and SM are prone to spinal cord (SC) compression, which can result in neurologic deficits. However, it is unclear whether these patients are amenable to surgery, and further studies are needed to determine the efficacy of surgery for patients with RCC and SM. Therefore, the purpose of this study was to analyze the outcomes of surgical treatment for RCC patients with SM. Twenty patients with RCC and SM who underwent surgery between December 1991 and February 2003 were enrolled in this study. All patients had a medical history of RCC. Using MRI, the presence of SM and the level of the lesion were recorded. Neurologic assessment was performed by means of a standardized questionnaire before and after surgery. Long-term follow-up information was obtained for all patients by telephone interview. The following variables were evaluated

Autoimmune thrombocytopenic purpura in a 46-year-old woman with primary biliary cirrhosis. A 46-year-old woman presented with anemia and thrombocytopenia. Coagulation tests were normal except for a prolonged thrombin time, and autoantibodies against platelets were detected, indicating the presence of autoimmune thrombocytopenic purpura. The diagnosis was confirmed by the presence of characteristic histological changes on bone marrow biopsy and bile duct cirrhosis on liver biopsy. The patient received immunosuppressive treatment with prednisolone and azathioprine. There was no evidence of relapse during treatment. This is the first reported case of autoimmune thrombocytopenic purpura in primary biliary cirrhosis. Previous design work includes the refrigeration and heating systems for the recently opened Brooklyn Brewery, as well as the South Bronx Greenway, which provides a major transportation route connecting LaGuardia and Harlem. The team successfully addressed the challenges of the overall design: Reduce the site area in compliance with zoning regulations, integrate a centralized cooling and heating plant with an on-site electricity generation system, achieve a 24/7 electrical power supply, and limit site footprint in order to preserve the views of the water and the surrounding buildings. "We are exceptionally proud of the completed project," says project director Jose Mazarella of the structural engineers. "We not only incorporated the greenest building technologies to sustain the laboratory while minimizing environmental impact, but we did so in a way that provided a contemporary and artful design statement." BEIJING, March 10, 2011 /PRNewswire-Asia-FirstCall/ -- Roche (Euronext: RCH) ("Roche") and Shandong Ruida Pharmaceutical Group

Co., Ltd. ("Ruida") (Shandong Ruida, Roche and the Roche Group shall, together, for the purpose of this news release, be referred to as the "Parties") today announced the signing of a letter of intent to form a 50/50 JV to develop, manufacture and commercialize in China, Roche's Basel Institute for Clinical Chemistry and Shandong Ruida's blood platelet concentrates business. The parties have also entered into a definitive letter of intent to form a JV to enter into a technology transfer and development agreement, develop, manufacture and commercialize the syntheses
