An AutoCAD document may be annotated with one or more annotation layers. Annotation layers provide "logical" information which can be linked to either 2D or 3D objects. There are various types of annotation layers, such as title, notes, dimension, marker, model, building and so on. The various types of annotation layers support different editing methods. The annotations can be linked to any CAD object (including other annotation layers). The annotations can be linked to a specific layer (layer properties) or be shared by all layers (layer settings). File structure A CAD file is composed of layers, linetypes, blocks, groups, templates, dimensions, annotation layers and attributes. Layers are the main building blocks of a CAD file, and are organized in families. Every layer can have a scale factor, or scale, allowing the scale to vary for the entire layer or for a limited area. A layer is used to represent the geometry, texture, objects, text and other properties of a real-world object or a real-world object's part. Every layer is given a number, which refers to its order on the drawing. Layers may be placed on the default layer, and on one or more named layers. Layers are normally named automatically, as with most other properties in AutoCAD. Layers cannot overlap. Layers can be broken up into a group of layers, or a sublayers group. Grouping layers allows the layers to be removed, relocated or otherwise modified. A drawing contains either one or more drawings, or drawings within drawings, called sub drawings. A drawing, also called a drawing set or drawing list, is a hierarchical grouping of drawings. The hierarchy is built by drawing. A drawing is a simple document that has a drawing definition, which is an object that contains details such as linetype definitions, blocks, text, dimensions, annotation layers and attributes. A drawing contains one or more drawings, or drawing sets, which are a grouping of drawing definitions and options. In a drawing, you can create multiple pages. In a drawing, you can create multiple sheets, or sheet sets. A sheet or sheet set is a page of a drawing. A sheet or sheet set contains one or more sheets, which are a page of a drawing. The same drawing can have multiple pages, af5dca3d97
